Prior Art Citation

- 1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.**

Raaymaker (2002/0131347) and Iwazawa et al. (2003/0179665), both disclose an optical disk apparatus having the ability of calibrating the tilt servo system of the apparatus.

Reasons For Allowance

- 2. The following is an Examiner's Statement of Reasons for Allowance:**

Re claims 1-5

The prior art of record alone or in combination does not teach or suggest the method for calibrating an optical disk tilt servo system having the combination of steps with their recited process, and taken claims (claims 1-5) as a whole in combination with:

calibrating a focusing condition of the optical disk in the optical disk drive for generating a corresponding focusing result in the standard location and the calibration locations;
calculating different focusing results between each calibration location and the standard location; according to the different focusing results, estimating corresponding tilt angles between the surface of the optical disk and the calibration locations; and
determining whether angles corresponding to the calibration locations on the surface of the optical disk are equal.

Re claims 6-10

The prior art of record alone or in combination further does not teach or suggest optical disk drive having the combination of element with their recited function, along with having:

a calibration module capable of setting a standard location and at least two calibration locations, each of the standard location and

the calibration locations corresponding to different parts of the optical disk; the pick-up head capable of moving to the standard location and the calibration locations, and measuring focusing conditions of the optical disk in the optical disk drive for generating a corresponding focusing result; and a calculation module for calculating different focusing results between each calibration location and the standard location, and estimating corresponding tilt angles between the surface of the optical disk and the calibration locations according to corresponding differences of each calibration location; the calculation module capable of determining whether the tilt angles of the calibration locations on the surface of the optical disk are equal.

Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably **accompany** the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
